

Glassfibre Reinforced Plastic Tanks

Product compliance

GRP tanks are commonly used for water and waste water storage/treatment and are ever increasingly being used to provide oil/water separation. These tanks are usually buried underground.

We were approached by the UK's largest manufacture of these tanks to check the design of various GRP product lines to ensure compliance with EN code requirements when the storage tanks are in use.

Client: Environmental Treatment Systems Limited
Period: 2006-2007
